

Implementation of SDGs at the Faculty of Psychology

6. Clean Water and Sanitation

6.5. Water in the community

6.5.4. Sustainable water extraction on campus

Rain Ground Tank System

Description:

As a form of our commitment to sustainable water management, the Faculty of Psychology has integrated the Rain Ground Tank System into our infrastructure. This eco-conscious system revolutionizes the way we harness rainwater, capitalizing on natural processes to ensure efficient water utilization. Through the Rain Ground Tank System, rainwater is naturally absorbed into the ground, aligning with the principles of the natural water cycle. This method allows us to capture and store rainwater efficiently, promoting sustainability and reducing our reliance on traditional water sources. By implementing this environmentally friendly technology, we contribute to groundwater recharge, which is critical for ensuring long-term water availability.
